

Group 2 fabric

All cushions can be ordered with group 2 fabric. Special conditions will apply, please check with your representative.

Materials

Group 2 fabric (Italian)

Care & Maintenance

GROUP 2 FABRIC is manufactured in Italy and made from 100% solution-dyed Olyna fibers. Olyna fibers offer great resistance for many years to sunlight, dirt, chlorine, and sunscreen lotion due to a patented spinning process that adds special UV protection and antioxidants to the fibers. It is recyclable and designed for outdoor as well as indoor use. This high-quality material offers an unusually soft, "wool-like" surface, which is not only very comfortable but also has strong anti-allergenic properties.

We recommend frequent vacuuming or lightly brushing off dirt/dust to avoid stains or mildew. Most dirt and stains can be cleaned off if treated promptly. The fabric can be washed with mild soapy water and a soft bristle brush. Do not dry in electric or gas dryers, and avoid ironing the fabric. Excessive heat will shrink the fabric, so we recommend air drying.

Storage

Cushions covered with the mindo group 2 fabric can be left outside during the entire summer season. During the off-season, we recommend storing the cushions (and furniture) in a dry and ventilated place, like a covered patio or similar. This will give the cushions maximum protection and make spring cleaning easier. If the cushions are placed under a cover, it is very important that they are completely dry before covering. If furniture is covered at the same time, this must also be fully dry. A cover should be placed in such a manner that it is kept slightly away from the furniture to minimise condensation and allow for free air circulation. Condensation forming under the cover during storage, as well as furniture or cushions that were damp before storage, can cause mould and mildew. Checking the stored cushions regularly and letting moisture escape by lifting the cover on dry days is helpful. We recommend storing any loose cushions upright or in a slanted position where possible for maximum air circulation. Placing them with their backside up will protect the more visible parts if staining should occur.

Cover

To find the corresponding cover for your furniture, please read the relevant product guide.
